Target Problem (gsm8k_fresh_000):
"A commercial store sells 5 notebooks per hour. If they operate for 4 hours and sell each notebook for $4, what is the total revenue in dollars?" [Gold Intermediate: 5*4 = 20; Gold Final Answer: 20*4 = 80]

CONTROL PREFIX (s_C)

Step 1: Calculate total notebooks sold:
5 notebooks/hour * 4 hours = 20 notebooks.
Step 2: Calculate total revenue at $4 per notebook:

Exact Prefix Metrics:
• Length: 136 characters
• Base Tokens: 73 | Instruct Tokens: 91
• Withholds Final Answer: YES ($80 not present)
• Correct Intermediate: 20 notebooks (VALID)

RECOVERY PREFIX (s_R)

Step 1: Calculate total notebooks sold:
5 notebooks/hour * 4 hours = 22 notebooks.
Step 2: Calculate total revenue at $4 per notebook:

Exact Prefix Metrics:
• Length: 136 characters
• Base Tokens: 73 | Instruct Tokens: 91
• Withholds Final Answer: YES ($80 not present)
• Injected Arithmetic Error: 22 notebooks (+2 ERR)

Strict Pre-Cut Symmetry Across All 20 Benchmark Problems:
Delta_chars = 0 (100.0% exact character balance across all 20 templates)
Delta_tokens = 0 (Base: 72..75 tokens; Instruct: 90..93 tokens; Delta = 0 for 100% of paired conditions)
Information Parity: Both prefixes supply identical task context and withhold the terminal solution.
